# Water Cooled air conditioners

## HWP 36–275 series

The HWP units provide a choice of cooling only or reverse cycle (heat pump) packaged system air conditioners designed and developed to comply with and exceed AS/NZS 3823.

# Water Cooled air conditioners

## HWP 36–275 series

### Applications

The HWP-K units are ideal for multi-unit installations such as high-rise office, apartments or hotel buildings, where the flexibility of individual zone control is required.

## INTRODUCTION

The temperzone HWP-K Series represents a range of ducted, water sourced, packaged air conditioners designed to provide year round comfort to room occupiers.

Compact and reliable, these units can be installed above ceilings/corridors, or in other concealed spaces, saving valuable floor space and providing conditioned air direct to necessary locations.

HWP-K Series units are designed to be used with simple duct layouts. To take maximum advantage of this feature, units should be located as close to the space to be air conditioned as acoustic criteria allows. Multiple small units, utilizing minimal duct lengths, prove more economical than a single large central ducted unit.

Designed also to suit different climates, the HWP-K units are available in three versions:

1. Reverse Cycle (R)  
ie Heat Pump / Cooling & Heating
2. Cooling Only with Electric Heat (CE)
3. Cooling Only (C) – not available in Australia

The standard unit is right handed, i.e. when facing the discharge side of the unit, the water connections are on the right hand side of the unit. Opposite Hand versions are also available.

In office buildings, an HWP unit system can provide the ideal off-peak system for occupied areas when the main system is not running, e.g. night time, weekends, holidays.

HWP unit systems can be applied to provide owner occupiers with individual control and billing, thus avoiding large central plant room areas, e.g. in apartment buildings.

Installing multiple reverse cycle versions enables simultaneous heating and cooling in different parts of a building.

Multiple HWP units are typically part of an overall hydronic system that incorporates some form of heat rejection equipment – usually a cooling tower or dry air cooler (radiator). Complementing the HWP Series is the temperzone ACW Series radiators – a range of closed circuit water coolers which serve as the central plant for rejecting heat collected by the HWP units. Refer to your nearest temperzone representative for further information on the ACW Series – only available in New Zealand.

# Water Cooled air conditioners

## HWP 36–275 series

### FEATURES

#### Refrigerant R410A

Each unit is factory charged with refrigerant R410A, which has a zero ozone depletion potential.

#### Efficient

These air conditioners provide one of the most efficient forms of cooling and/or heating you can invest in, as evidenced by their high EER figures. Each unit incorporates a high efficiency scroll compressor. Heat exchange air coils use inner grooved (rifled) tube for better heat transfer.

#### ThermoShell® Technology

The unit includes a compact long life highly efficient water heat exchanger design with non-fouling properties.

#### Performance

The fan speed can be stepped (ie High/Med/Low) to match the supply air requirements.

#### Durable

Temperzone units have a tough galvanised steel construction. The air coil is die formed plate type epoxy coated aluminium fins mechanically bonded to high efficiency inner grooved copper tubes. Each HWP unit alone (excluding hoses) will withstand a maximum water pressure of 3200 kPa (464 psi). Condensate drain trays are insulated and powder coated for complete moisture protection. The drain tray is easily removed for inspection and cleaning.

#### Quiet

HWP units have bonded polyester lined compressor and fan compartments to minimise noise. Spring mounting kits are supplied with every unit to minimise the transfer of any vibration.

#### Safety

Units are fitted with a high pressure lockout that protects the unit in the event of water flow failure in cooling mode. Sensors protect against low air coil temperature and loss of refrigerant. Units include an anti-rapid cycle timer for compressor on/off protection.

HWP reverse cycle units also have a low refrigerant pressure sensor to protect against icing-up of the water within the unit's ThermoShell® condenser on heating mode and a water pump flow verification input to protect individual units from a loss of water flow.

Convenient lockout contactor resetting is simply achieved by turning the power to the unit off and then on again, avoiding the need to gain access to each unit if the cause is failure of central water supply.

Each compressor has internal overload protection.

The HWP reverse cycle version has a low refrigerant pressure limit and a reverse cycle change-over valve.

#### Insulation

Closed cell foam insulation has been used to inhibit mould growth in places where moisture could be present and provide thermal protection, eg to minimise cold tracking. Bonded polyester insulation ensures no particles are introduced into the air stream. Insulation is foil faced and meets fire test standards AS 1530.3 (1999) and BS 476 parts 6 & 7.

#### Control Options

The unit's UC8 Controller can be connected to Temperzone's SAT-3, TZT-100 or other compatible room temperature controllers supplied by others. It is BMS compatible via Modbus/RS485 port with multi-unit control possible – either via digital and analogue signals or via Modbus. The UC8 can activate the water circulating pump (only when required) and/or a local water on/off valve, thus saving pump running costs. It can also control the position of a motorised water flow control valve (using 0–10V signal), so that head pressure control can be achieved and lower water temperatures can be used on cooling mode.

# Water Cooled air conditioners

## HWP 36–275 series

### Self Diagnostics

Any faults detected are displayed on the UC8 and optional SAT-3 Wall plaque. General fault and run status output signals are available for remote indication to building management systems.

### Peace of Mind

Temperzone operates a quality management system that conforms to AS/NZS ISO 9001:2008. The company's products have been selected, against worldwide competition, for use in some of the most exclusive projects – chosen because of their proven efficiency, durability, performance, reliability and value.

### Electric Heating

(HWP-CE model)

Electric element/s have spiral wound stainless steel fins to give increased area and low surface temperature. They are totally enclosed within the unit and are supplied with auto (90°C) and manual (120°C) high temp. safety thermostats required to meet AS/NZS 60335.2.40 2006. A fan run-on timer for rapid heat dissipation is incorporated into the UC8 as well as a 70° fast acting temperature sensor to ensure overall safety.

## ACCESSORIES (SUPPLIED)

### Air Filter

Each unit is supplied with a washable synthetic fibre EU2/G2 rated filter that is integrated with the return air spigot. This filter complies with AS/NZS 1324.1:2001 for airflows up to 1000 l/s.

For ducted return air applications, filters should ideally be located in the ceiling return air grille/s and removed from the HWP unit's return air spigot, thereby improving access for cleaning.

### Flexible Hoses

The HWP is supplied with two high pressure hoses (HWP 36–142: 600 mm long; HWP 172–275: 800 mm long) for water connections. The hoses have female pipe threaded nut fittings at both ends. Maximum water pressure for 600 length is 1720 kPa (250 psi); 800 length is 2070 kPa (300psi).

### Spring Mounting Kit

The HWP Series Spring Mounting System, supplied with each unit, has been designed to minimise the transfer of vibration from the HWP unit into the building structure. Recommended for use in all installations.

## OPTIONAL EQUIPMENT

1. temperzone SAT-3 Controller or TZT-100 Controller
  - connection cables supplied separately.
2. Condensate -Lift Pump – max. lift 800mm.

## INSTALLATION

### Acoustics

Shorter duct applications will require greater attention to acoustic criteria (refer page 15).

### Mounting

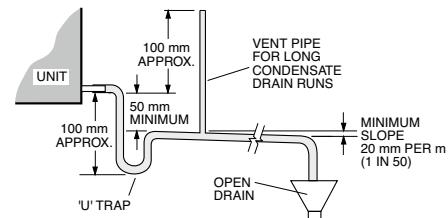

It is recommended that HWP units be mounted using the spring mounting system supplied. This system minimises transfer of vibration into the building structure.

### Positioning

When determining the installation location consideration should be given to each unit to facilitate future servicing and maintenance, e.g. room for removal of filter and access to electrics.

### Condensate Drain

The condensate drain should have a slope of at least 1 in 50 and must not be piped to a level above the unit drain tray.

Condensate drain traps are required on the larger models, i.e. HWP 79–275.

An optional condensate lift-pump is available to remove condensate from the unit in tight installations where a well sloped drain line is not practical.

# Water Cooled air conditioners

## HWP 36–275 series

### WATER CONNECTION

#### General

The HWP unit's IN and OUT water connections are male pipe threaded. The unit can be piped directly or by using two temperzone flexible high pressure water hoses (supplied) which have female pipe threaded connections at each end.

Poor quality water supply must be pre-filtered and it is essential that adequate water treatment is maintained, particularly where open cooling towers are used.

Note: It is recommended that the water supply system be fitted with a water flow switch and water flow verification circuit. These items prevent the HWP units from going into fail safe lockout status due to a loss of water flow. Failure to install the above items could require the resetting of all HWP units in the system – by breaking the power supply to each unit or by Modbus command.

#### Circuit Balancing Valve

It is recommended that a circuit balancing valve be fitted to maintain water flow at a constant rate. The water flow rates in litres per second (l/s), at nominal water temperature, are stated in the Specifications Table (page 21-22). The water circuit needs to be balanced to suit the design  $\Delta T$  of the central water system.

The HWP unit controller will protect the refrigeration system of the unit under extreme conditions. On heating cycle it protects to ensure the evaporating temperature does not drop below freezing point for an extended period. **It is important that the leaving water temperature does not fall below 4°C.** The entering water temperature will determine how low the water flow can be allowed to go without causing nuisance trips from this protection. Refer page 14 for flow data.

#### Water Circulating Pump & Flow Verification Option

In order to promote efficiency and avoid running the water circulation pump unnecessarily, the unit's UC8 Controller can be used to control the activation of the pump prior to running the compressor. After activation of the circulating pump contactor (not part of the HWP unit), the UC8 waits for the pump flow verification relay contact (PFVR) to close before energising the compressor contactor (CMC) and therefore starting the compressor (refer wiring diagram). The UC8 also de-activates the pump when the compressor stops.

#### Water Control Options

System designers have one of two options:

##### 1. Water Regulating Valve Control Option

A 0-10V signal is available on output V1 for the control of a water flow control valve (optional; not supplied by temperzone); refer wiring diagram. When used, the valve is closed (0V signal) when the compressor is off. When the unit is cooling the signal will control the valve to obtain an optimum condensing temperature. When the unit is heating (reverse cycle units) the valve is directed fully open (10V signal).

OR

##### 2. Water Shut-Off Valve Option

This will ensure the water is not flowing through the unit when it is not operational for a long period of time, thereby reducing the overall central pump power usage. The water shut-off relay on the HWP can be used to activate a water shut-off valve (supplied and fitted by others).

### SAFETY FEATURES

1. HP and loss of refrigerant protection.
2. Anti-rapid cycle timer and internal overload for compressor protection.
3. Circuit breaker control circuits.
4. Electronic pressure control prevents icing up of the Thermoshell® heat exchanger during heating cycle.
5. Frost protection on cooling cycle.
6. Sensor fault indication.
7. Compressor minimum run time to ensure oil return.

### ELECTRICAL

The electrical supply required (including voltage fluctuation limits) is:

#### HWP 36/48/59/79/98:

1 phase 230 V a.c. 50 Hz with neutral and earth.

#### HWP 118/142/172/192/255/275:

3 phase 400 V a.c. 50 Hz with neutral and earth.

All units are compliant to the latest MEP standards.

### NOMENCLATURE

Example

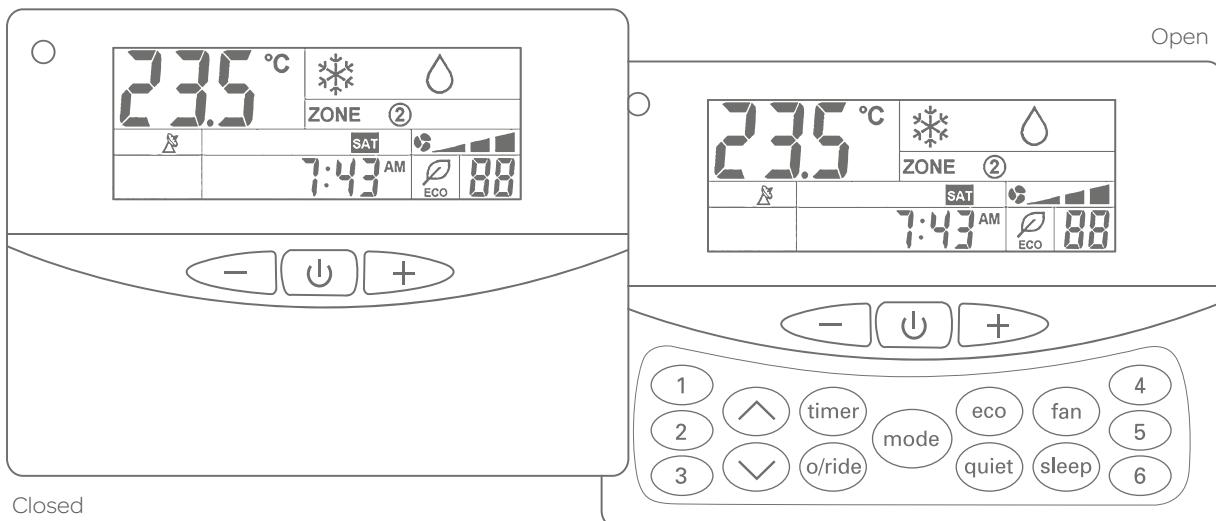

<b>H W P</b>	<b>7 9 C E K S</b>	
Series	Size	Type
H - Hideaway	Divide by 10	C - Cooling only
W - Water Sourced	to get approx.	CE - Cooling only with electric heat
P - Packaged	nominal Capacity in kilowatts	R - Reverse cycle
		K - Refrigerant R410A
		S - Single phase power supply

### TECHNICAL SUPPORT

For more information on the manufacturer or product support information, visit the website [www.temperzone.biz](http://www.temperzone.biz)

# Water Cooled air conditioners

## SAT-3 Controller (Optional)

### FEATURES SUMMARY

- Cool / Cool Dry / Heat / Auto Dry / Auto / Fan Only modes.
- Auto / High / Medium / Low fan speed selection. (customisable).
- Temperature setting range from 16°C – 30°C.
- LED to indicate status of the unit [Power On/Off].
- Room temperature display.
- Real time clock.
- **7 day timer** – up to two events (four start and/or stops per day)
- On demand countdown run timer, up to 9 hours.
- Auto-Restart or No Restart after power failure.
- Continuous or Intermittent selection of fan run-on in dead zone.
- Backlit screen for ease of reading; changes colour for each mode.
- Soft touch tab keys
- Battery backup (Lithium).
- **Sleep function** – improves night time comfort and saves energy.
- Audible beep to acknowledge key entry or wireless remote control.
- Low voltage control cable.
- **Colour:** white and light grey (Keypad - green and blue).

### Optional:

Remote return air sensor

**Note:** Not backwards compatible with units using SAT-2.

### TZT-100:

Refer [www.temperzone.biz](http://www.temperzone.biz) for information.

# Water Cooled air conditioners

## Performance Data

### AIR HANDLING

Airflows are for a dry coil. Reduce airflow by 10% in high moisture removal conditions. In a free blow application, beware of exceeding fan motor's full load amp limit. Refer page 13 for filter losses. Air flows given are for HWP units without filter installed.

## Performance Data

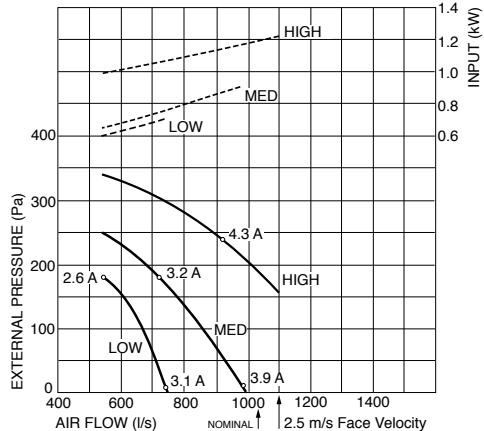

### AIR HANDLING (CONT'D)

Airflows are for a dry coil. Reduce airflow by 10% in high moisture removal conditions. In a free blow application, beware of exceeding fan motor's full load amp limit. Refer table below for filter losses. **Air flows given are for HWP units without filter installed.**

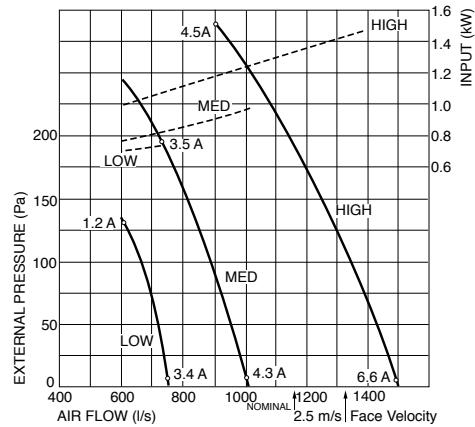

HWP 142

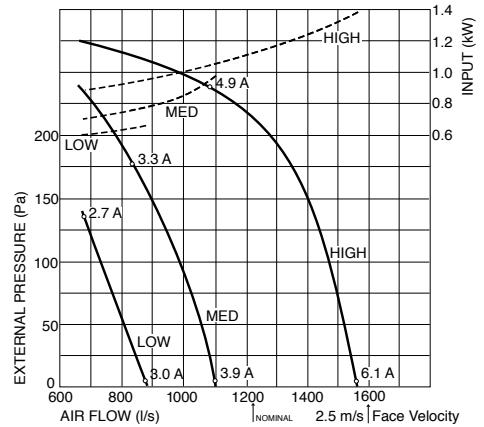

HWP 172

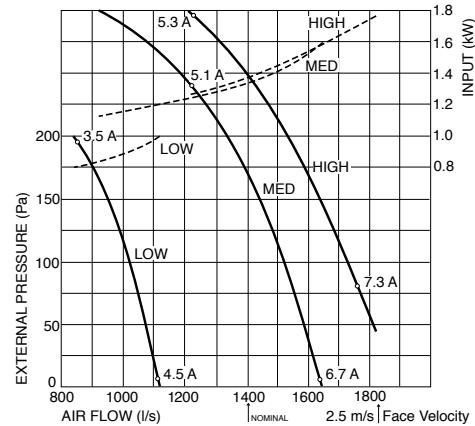

HWP 192

HWP 255

HWP 275

#### Note

- In tropical (high humidity) conditions care must be taken to select an air flow which gives a suitable coil face air velocity, to prevent water carry over.
- Applications using full or high proportions of fresh air should be referred to temperzone engineering office to establish the correct selection of units.

#### Pressure Drop - EU2/G2 rated filter media (clean):

Coil Face Velocity (m/s)	1.5	2.0	2.5
Pressure Loss (Pa)	15	25	40

# Water Cooled air conditioners

## Performance Data

### WATER FLOW VS PRESSURE DROP

The chart below shows Water Flows and Pressure Drop at varying water temperature differences.

Nominal water flow is at a Water Temperature difference of 5K. The reduced water flows shown below have minimal effect on performance.

## Performance Data

### SOUND PRESSURE LEVELS (SPL) WITHIN A ROOM

Deduct the room absorption effect below from Sound Power Levels (SWL) to obtain Sound Pressure Levels within a room.

**Note:** Occupant at least 1.5 m from sound source.

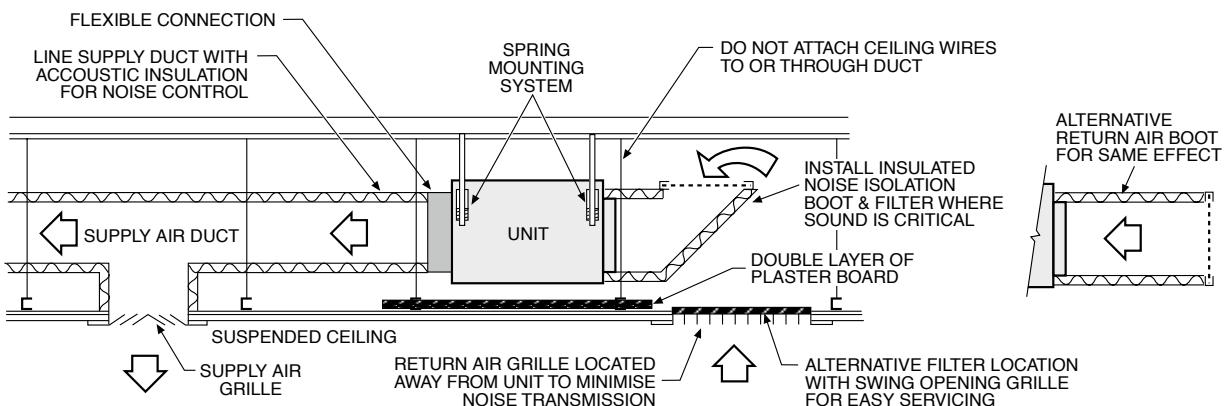

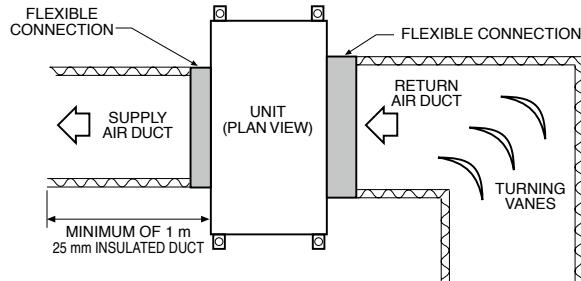

OCTAVE BAND FREQUENCY Hz

	125	250	500	1K	2K	4K
ROOM ABSORPTION EFFECT dB						
Soft	4	8	11	11	11	11
Medium	3	7	8	9	9	9
Hard	0	1	3	4	4	5

### RECOMMENDATIONS FOR NOISE ISOLATION

#### Particularly for high static installations:

1. Avoid installing units, with non-ducted return air, directly above spaces where noise is critical.
2. Use flexible connections between unit and rigid ducting.
3. Use generously sized acoustically lined ducts.
4. If generous duct size is not possible, use turning vanes on bends to reduce air turbulence (regenerated noise).
5. Use 90° bends in ducting to significantly assist in noise reduction.
